Invensys to Implement IntelTrac Mobile Solutions for Chevron Upstream Operations

-- IntelTrac Solution to provide mobile workers with enhanced decision-making capabilities --

FEBRUARY 25, 2010/PLANO, TEXAS – [Invensys Operations Management](#), a global provider of technology systems, software solutions and consulting services to the process and manufacturing industries, today announced that it has contracted with [Chevron](#) to provide the [Wonderware IntelTrac™](#) mobile workforce and decision-support system. The mobile solution will support Chevron's upstream operations with configurable software and ruggedized mobile hardware solutions that enable workers to better manage workflow, procedural and general management tasks which focus on plant, production and field operations, maintenance management, production, inventory and logistics tracking and compliance applications.

Invensys will provide the IntelTrac solution to assist operators, field engineers, technicians and supervisors in creating inspection and regulatory procedures. It also will assign, schedule and execute rounds and report findings that are prioritised based on the level of severity of the issue. IntelTrac provides the capabilities for an

organisation to create and define procedures based on best practices, as well as regulatory compliance rules and regulations. Procedures are re-usable across many operator and technician rounds to ensure that inspections are performed on a routine basis as mandated by overall corporate policies, as well as regulatory agencies.

“Chevron wants a mobile platform capable of supporting many business work processes and an ‘out of the box’ solution,” said Eric Moorehead, Invensys Operations Management North America Client Care executive program leader. “Our IntelTrac solution has been used by Chevron in its downstream business process for several years. By extending the availability of IntelTrac, Chevron anticipates being able to support many new business processes using a single mobile platform for operations, maintenance, reliability tracking, production data collection and safety inspections across the enterprise.”

Chevron has been using Invensys solutions since the early 1990s for its downstream operations to standardise refinery process steps and deliver decision support to field workers. Invensys solutions currently deployed at

Chevron include Triconex® safety systems, [Wonderware IntelaTrac](#), [Wonderware InTouch® human-machine interface](#), [Wonderware® System Platform](#), [Wonderware Historian and Wonderware ActiveFactory™](#), a trending, analysis and reporting application.

About Invensys Operations Management

Invensys Operations Management, a division of Invensys, is a leading provider of automation and information technology, systems, software solutions, services and consulting to the global manufacturing and infrastructure industries. Headquartered in Plano, Texas, its solutions are used by more than 40,000 clients around the world in more than 200,000 plants and facilities.

Invensys Operations Management's offerings are delivered under several prominent industry brands, including Avantis, Eurotherm, Foxboro, IMServ, InFusion, SimSci-Esscor, Triconex and Wonderware. The company's approximately 9,000 employees and its global partner ecosystem integrate these products and services to help clients collaborate across systems and enterprises in real time, extracting critical data to make faster, better decisions and synchronize their operations from the plant floor to the executive offices, aligning production goals with business objectives.
