

Press Release

**Surrey Satellite launches the first U.S. commercial E-Commerce Website selling complete Small Satellite Systems, Subsystems, Solutions and Services**

*Englewood, Colo., August 10, 2010:* Surrey Satellite Technology US LLC (SST-US) announces the launch of “Surrey Online”—an e-commerce website that handles online sales of SST-US commercial satellites and related products.

Open for online business starting August 10, 2010, Surrey Online sells all of Surrey’s available commercial, off-the-shelf flight subsystems, ranging from single standalone units, such as GPS receivers, X-Band antenna pointing mechanisms, and reaction wheels, to full subsystem suites such as Power Conditioning and Switching systems.

In the near future, Surrey Online will grow to include satellite platforms, payloads, ground station equipment, and related services.

Dr. John Paffett, CEO of SST-US, stated, “Surrey Online enables our U.S. customers to speed up their procurement and meet their mission timescales and is a key initiative in our endeavor to provide rapid and economic access to space. We provide a secure, authenticated service, backed up by phone and email support, to answer any questions our customers want to ask before they click to buy.”

SST-US was recently awarded an Indefinite Delivery/Indefinite Quantity (IDIQ) contract by NASA for three small satellite platforms. U.S. government agencies are able to procure the SSTL-150, SSTL-300, and SSTL-600 via the NASA Rapid III catalog. Visit <http://rsdo.gsfc.nasa.gov/>.

**About Surrey Satellite Technology US LLC**

SST-US is a Delaware-registered company, with its principal offices located in Englewood, Colorado. The company, a wholly owned subsidiary of Surrey Satellite Technology Limited (SSTL), was established in 2008 to address the United States market and its customers for the provision of small satellite solutions, applications, and services.

## Press Release

SST-US, albeit foreign owned, has been structured and organized to be an American company under American control and operation.

The activities of SST-US draw extensively on the heritage, background, and capability of all elements of the Surrey group, with a proven track record in provision of high quality, rapid, cost effective small satellite solutions, applications and services. SST-US' owner, SSTL, is fully committed to establishment of the capability, approach, culture, ethos, and product portfolio within the United States, going to lengths to ensure that the overseas expansion occurs transparently to its customer base without loss of capability or quality.

Since 1981, Surrey has launched 34 satellites with 2 additional satellites scheduled for launch this year. Surrey has provided satellite missions, subsystems, training and development programs, consultancy services, and mission studies for NASA, the U.S. Air Force, LANL, and other institutional and commercial customers, with its innovative approach that is "*Changing the Economics of Space.*"
